Category:		Estimated time:	0.00 hour
Target version:			

Description

Your module contains security issues.

- Make sure that your data is always protected when doing an insertion. For instance, make sure that you do have an integer with an explicit (int) cast, and that text is protected against SQL injections thanks to the pSQL() method.
- Be careful (string) is not a secured cast, you must pSQL.

Have a look at this doc to find more information and pass the technical validation easier : <https://goo.gl/T0G9T2> !

-> WHERE id_order_state = "" . \$id_order_state . "" in /itsttangiendas.php line 310

Please enable the debug mode while testing your module and correct all related errors showing up. See the attached file

Exception

HTTP 500 Internal Server Error

API Token is not set
